Athlete's Foot Spray

Medical Device CE 0481

- **Treats and prevents athlete's foot**
- **Hygienic- No hand contact required**

Advice: Carefully read the instructions for use before using Athlete's Foot Spray even if you used this medical device before. The information may have been amended according to new research and findings in the time since you opened your last package. This medical device can be obtained without a prescription. Nevertheless, Athlete's Foot Spray should be used with great care in order to get a good result. Keep these instructions for use in case you need to consult them again.

Application: Athlete's Foot Spray is intended for the treatment and prevention of athlete's foot (ringworm of the foot or tinea pedis). Athlete's foot often goes hand-in-hand with an itchy red rash between the toes and on the soles of feet. Athlete's foot will also often lead to an unpleasant smell. Athlete's foot is infectious. The fungus spreads easily at hot and moist places such as, for example, swimming pools, showers and wet floors. Athlete's Foot Spray reduces itchiness and irritation and prevents the unpleasant smell.

Method of application: Dry both feet and apply the spray twice a day (in the morning and in the evening) as a thin layer on both feet. This is required because the fungus may also be present on the other foot without it being visible. Apply the spray under and in-between the toes and on the soles and sides of your feet. Allow the spray to dry for 1 or 2 minutes so that it can create the protective layer.

Duration of use: An improvement can usually be seen after a few days. Continue the treatment for a week after the athlete's foot has completely cleared.

Note: irregular use or stopping the treatment prematurely will increase the probability that your symptoms will return.

How it works: Athlete's Foot Spray a medical device with natural and nature-identical ingredients for the treatment of athlete's foot. Athlete's Foot Spray is a spray that creates a protective layer to the skin of the foot. The combination of ingredients penetrates the upper skin-layer and callus and provides an environment that is unfavourable for the development of fungus that causes athlete's foot. Natilact is a natural ester that protects and hydrates the skin. The spray will adhere well to the skin and, therefore, the active ingredients will be fixed and provide longer term efficacy at the right place.

Side effect(s): Side effects are not yet known when used following the instructions for use.

Use during pregnancy and/or breastfeeding: No data is available about using Athlete's Foot Spray during pregnancy or the breastfeeding period. If you are pregnant or breastfeeding, please consult your doctor or pharmacist before using this product.

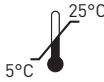

Warnings:

- Keep out of reach of small children;
- If you are suffering from hypersensitivity reactions, stop using Athlete's Foot Spray;
- Only for external use;
- Consult your doctor when you do not see an improvement within two weeks.
