## General advise:

Carefully read the instructions for use prior to using Anti Itch Cream Baby, even if you used this medical device before. The information may have been amended according to new research and findings in the time since you opened your last package. This medical device can be obtained without a prescription. In spite of this, take care when using Anti Itch Cream Baby in order to obtain a good result. Keep these instructions for use in case you need to consult them again.

## Application:

Anti Itch Cream Baby is a topical medical device for the treatment of dry skin and for alleviating the symptoms of atopic dermatitis, irritant contact dermatitis and other forms of dermatosis in babies and small children. Atopic dermatitis is a skin disease associated with dry skin and itchiness (pruritus). Anti Itch Cream Baby alleviates itchiness and soothes irritated skin.

## The product contains three active ingredients:

ceramide NP, glycerine and olus (vegetable) oil. This moisturising complex with caring and protective properties helps to repair the barrier function of the skin, boosting the barrier effect and offering physical protection against irritants and allergens.

## Instructions for use:

Anti Itch Cream Baby is for topical use with babies and small children. The product should be applied to affected areas two to three times a day for not more than 30 days. Anti Itch Cream Baby is indicated for use as monotherapy or adjunctive therapy in the management of xerosis, atopic dermatitis, irritant contact dermatitis and other dermatoses for patients of any age. As a monotherapy, it has been shown effective for xerosis, for mild to moderate atopic dermatitis and irritant contact dermatitis. It may also be used in combination with standard topical or systemic therapy, including topical corticosteroids, since it has no known drug interactions.

## Ingredients:

Aqua, Caprylic/Capric Triglyceride, Dicaprylyl Carbonate, Polyglyceryl-2 Dipolyhydroxystearate, Glycerin, Behenyl
